

COLLABTECH HOLOMAP

collabtech layered taxonomy

co-created with AI using integrative approaches

V1.0

CC BY-NC-SA 4.0

The evolutionary stages are not linear — they are spiralic.
We loop through them at new octaves for each creation.

LAYER	PRIMITIVE	APP TYPE	2–3 Real Products (or Opportunity)
Identity & Access: who are we? can we trust?	Portable profile	Unified work ID Skills / proof passport	LinkedIn / GitHub profiles; Disco (VC wallet) Credly (OpenBadges); SpruceID (DID/VC)
	Fine access	Cross-company access broker Role + scope tokens	Okta / Autho; WorkOS (SAML/SCIM for multi-org apps) Auth/zed (SpiceDB); Permit.io
	Proof of past work	Verifiable attestations Deliverable hashing	Ethereum Attestation Service (EAS); Credly IPFS / content addressing; OpenTimestamps / OriginStamp
Teaming: whom and how do we team up?	Matching	Small-squad router Human/AI matchmaker	Upwork / Toptal / Braintrust Opportunity: match steps to the “best agent + human buddy” by task type + past reliability
	Join / Leave	One-click onboarding Clean off-boarding	Rippling; Deel Rippling; Okta Workflows
	Roles & responsibilities	Living role cards	Notion; Coda
Work Map: what are we doing?	Tasks	Linked task board	Linear / Jira / Height / Asana
	Links to files/decisions	Decision pinning Artifact linking	Coda (Decision Log); Notion (Decision DB + backlinks) GitHub (issues ↔ PRs); Google Drive smart chips / Notion backlinks
	Status & dependencies	Dependency planner	Jira Advanced Roadmaps; Asana dependencies; Height dependencies
Agreements & Money: how do we pay?	Click-agree mini-contracts	In-task agreement Micro-agreement templates	Juro / Ironclad (CLM embeds); Opportunity: true in-task micro-agreements inside Linear/Notion Common Paper; oneNDA
	Auto-split & escrow	Milestone escrow Real-time splitter	Upwork Escrow / Fiverr; Escrow.com oxSplits; Stripe Connect (Transfers @ on-platform balances)
	Settle on delivery/progress	Receipt-to-pay Progress meter payouts	Upwork “accept to release”; Bill.com; Opportunity: proof-attached payout from task card Sablir; Superfluid; Opportunity: fiat streaming tied to task progress
Decisions & Rules: how do we decide?	Approvals	One-tap greenlight	Jira Approvals / ServiceNow approvals; Slack approvals apps (Range/Geekbot add-ons)
	Policies trigger hand-offs/payout	Policy packs Payout rules	Workato / Zapier / Tines; Temporal.io Stripe Billing + Connect; Metronome
	Disputes	Rapid mediation Evidence bundle	FairClaims; Kleros Notion / Google Drive; EAS
AI Helpers: how do agents help?	Scoped delegation	“Do this step” agent Permissioned tools	GitHub Copilot / Copilot Workspace; Sweep AI OpenAI function/tool calling (scoped); Guardrails.ai
	Logs & audit	Run log / replay	LangSmith (LangChain); Langfuse; Helicone
	Schedule / orchestration	Agent scheduler	LangGraph / CrewAI; Temporal.io / Airflow
Insights: what did we learn?	Progress telemetry	Velocity dashboard	Linear Insights; Jira Velocity; Haystack / Athenian
	Reliability score	Partner/agent scorecards	Upwork ratings; Opportunity: cross-tool reliability score for teams/agents
	Costing / usage meter	Usage & spend view	Metronome; Stripe metered billing; CloudZero / Finout; LangSmith usage (LLM)
Interfaces & Bridges: how do we see/connect?	Unified hub	Work inbox	Linear Inbox; Asana Inbox; Height Inbox
	Notifications / rituals	Daily check-in	Range; Standuply / Geekbot; Parabol
	Connectors	Bridges to Drive/Slack/etc.	Zapier / Make (Integromat) / Workato; Slack task-linking apps; Drive/Notion embeds
